

MANOJ KUMAR

FRONT-END DEVELOPER

Full name	Manoj kumar Karajada	Address	Palasa, Andhra Pradesh
Email	manojkarajada.mk@gmail.com	Phone	+916900400881
Blog	kmanoj.com	Main Project	selfhost.dev

WORK

10/2021 -
PRESENT

Edumatica (Ed-tech)

Edumatica is an EdTech startup that relies on MERN Stack; as an IC role, I introduced the features like Payroll, Leave Management and the entire blog platform.

02/2020 -
10/2021

Freelancing (Bassguitar and Sharply)

Before working as a full-time employee, I worked as a Freelancer for developer short individualistic communities. I helped them in DevOps, guided them better on Opensource alternatives, and hosted them in production.

02/2016 -
10/2021

Personal Projects

Both [Leewardslope](#) and [Selfhost](#) are my projects which helped me get exposure to Freelancing and Fullstack developer role. With the passion for developing something on my own, I started these two projects and quickly realised many things were to be taken care of to make them a real-world project successfully.

EDUCATION & CERTIFICATIONS

HackerRank Certifications

Certificates after the completion of required assignments and exams.

[Javascript](#)

[ReactJS](#)

[Python](#)

Bachelor of Technology in Physics

Indian Institute of Technology, Guwahati

Even though I'm an Electrical graduate, I mostly spent my college time exploring cyber security and quickly learned the necessary traits required to become a full stack developer.

SKILLS

- Javascript
- ReactJS.
- NodeJS
- MongoDB
- REST API
- GraphQL API
- Cloud Computing
- Ansible
- Terraform
- Solidity
- Kali Linux

Modern JS with ES6 Syntax

With the addition of ReactJS skills, I became a web developer

Node JS is my preferred backend

All of the projects and work are related to MongoDB & Mongoose

NodesJS + Express is my go-to option for creating a REST APIs

I reply on tools like Strapi/GraphCMS/Hasura for GraphQL

I highly relied upon AWS and Digital Ocean services

My preferred IAC deployment tool

Both Terraform and Solidity, I used in my personal projects, never managed in working for production-level organisation

A Pentester OS by Offensive Security used for Ethical Hacking

Most of my work and freelancing projects were on the MERN Stack. Also, with the latest improvements in technologies like GraphQL, BAAS, and Web3; I'm also keeping an eye out for such projects
